NJ Conference a Success

On October 17th, the first ever Carcinoid Conference to be held in New Jersey took place in Manahawkin. Despite pounding winds, heavy rain and unseasonably cold temperatures, approx. 80 people arrived to hear lectures from Dr. Warner, Nancy Gardner and Dr. Oberg.

Overall, the conference was a huge success. The feedback surveys held mostly praise for the entire event with many gracious comments about how informative it had been. The only negatives were the hotel sound system and the hotel restaurant not being prepared (despite several advance notices to them from the conference planners).

There was a brief presentation about the Carcinoid Cancer Foundation of White Plains, NY, who is responsible for the start of all of the current support groups in the US and many abroad. A special tribute was extended on the loss of Monica Warner, with recognition being presented in her memory to Dr. Warner.

Dr. Warner lead off the

Dr. Warner addresses the group

lectures with his typically informative, and easily understood, explanations of the disease, with current diagnostic and treatment protocols.

Nancy Gardner

Nancy Gardner was our next lecturer. Nancy gave a rousing talk on being your own advocate, and provided a great deal of information about Sandostatin LAR. Some of the comments were that those attending seemed to not expect too much from her lecture, but were amazed at how informative it had been.

After lunch, Dr. Oberg rounded out the lectures with more, detailed information on carcinoid. He explained some of the treatment differences between the United States and European programs, explaining what benefits could be found. While Dr. Oberg's lecture was more technical, it was widely

NJ Mourns

With our first conference, this fall was a time of joy. It was also a time of sadness as we suffered the loss of Bob Quinn in September.

Bob, with his wife Janice by his side, was at virtually every meeting since his diagnosis in 2004. During that time, Bob persevered not just through carcinoid, but also a suspected skin cancer, and was determined to make life his priority. Bob and Janice had also planned to attend the patient conference in New Orleans this year.

In June, Bob was found to have another cancer, a bile duct cancer, this one much more aggressive. Bob and Janice were both dedicated toward helping others with Carcinoid, with Janice volunteering to be the secretary for the New Jersey group. It seemed that both had a special panache for life, especially when celebrated together.

All of us at the NJ Carcinoid Network share in the loss to the Quinn family and offer our deepest sympathies. We mourn the loss of Bob, while we admire his spirit and determination.

We are especially humbled that the Quinn family has chosen the New Jersey Carcinoid Cancer Network to receive donations to honor and celebrate Bob's life.

praised for the level of excellence and information.

After completion of the lectures, there was an open Question and Answer session, with all the lecturer's participating on the panel. This has always been a popular part of these conferences and we allowed extra time to accommodate as many questions as possible. In over 90 minutes, questions from 30 of the note cards submitted with questions were answered (we only did not get to about 10). Many of the questions were multi-part, and answered by more than one member of the panel.

Dr. Oberg

certificates toward a medical bracelet from their catalog. Thanks to all our other sponsors for their donations (Novartis Oncology, Carcinoid Cancer Awareness Network, the Carcinoid Cancer Foundation, and Inter Science Institute)

These lectures were not recorded. We are already considering another conference, possibly at another location. Date and place will be set up later.

A special thanks to all those behind the scene volunteers who made this run as smoothly as possible...from making hotel room arrangements, to transportation for the lecturers, to the folks who greeted you at the door.

Thanks to all who attended, and for your comments to help make the next one even better.

*"Hi, I'm from the government and I am here to help you" – Just Kidding!  
Thanks to Paul, Linda and Kathy for taking on welcoming duties*

Kathy McKenna donated several hand knitted "zebra" items and these were raffled, with the proceeds going to the Carcinoid Cancer Foundation. American Medical ID also provided two \$35 gift

# Bob Quinn

Continued from Page 1

From Bob's obituary in the Star Ledger:

Robert Patrick Quinn of Sparta passed to Our Lord on Wednesday, Sept. 23, 2009, at his home with his loving family at his side. "Bob", who was 73 years old, was born in Newark to Patrick and Jean Quinn. Family and friends will always remember how his passion for love, life and song knew no boundaries. He passed after a valiant battle with carcinoid cancer.

Bob graduated from St. Peter's College, Jersey City, with a B.S. in chemistry. He resided in Sparta since 1968, previously of Naval Air Station Patuxent River, Md. He served his country as a career naval officer for 23 years, attaining the distinguished rank of captain.

Following military service, he was an American Airlines pilot for 29 years, retiring as a captain in 1996. He was a communicant of Our Lady of

the Lake R.C. Church in Sparta. A loving patriarch and proficient aviator, Bob is survived by his beloved wife, Janice I. Quinn (nee McDonnell); son, Stephen and wife Nancy of Pennsylvania, son, Michael and wife Barbara of Kentucky, and son, Peter and wife Barbara of New Jersey, daughter, Susan and husband Colonel William Ellis of Virginia, son, Timothy and wife Lisa of New Jersey, and daughter, Patricia and husband Clint Olsem of California; 17 grandchildren; sister, Geraldine Opalak and husband Joseph; brother-in-law, Bishop Charles McDonnell; many nieces and nephews.

In lieu of flowers, the family asks donations to be directed to N.J. Carcinoid Cancer Network, 9 Maplewood Dr., Little Egg Harbor, N.J. 08087 or Pope John Angels Fund, 28 Andover Road, Sparta, N.J. 07871

Bob with his 3 year old grandson, Cormac

## NJ 2010 Regular Meetings

Jan. 10<sup>th</sup>  
Mar. 7<sup>th</sup>  
May 2<sup>nd</sup>  
Jun. 6<sup>th</sup>  
Sep. 12<sup>th</sup>  
Oct. 3<sup>rd</sup>  
Nov. 7<sup>th</sup>  
Dec. 5<sup>th</sup>

- All meetings begin at 1:30 PM and are held at Crossroads Christian Fellowship, 2815 Morris Ave., Union, NJ 07083, unless otherwise noted. Directions are available from our website at [www.NJCarcinoidNetwork.org](http://www.NJCarcinoidNetwork.org), or upon request.
- Meetings are typically held on the first Sunday of designated months, unless there is a scheduling conflict.
- It is not necessary to RSVP to attend a meeting.
- In case of inclement weather, a decision about holding the meeting will be made by 9:00 AM on the day of the meeting. Please call 609-812-9294 after 9:00 AM if the status is in doubt. If cancelled, the recording will be changed to advise of the cancellation. (Please note that we look at the entire state/regional weather to consider those that travel distances...so if in doubt, we suggest you call)
- There is no fee to attend any meeting, unless otherwise stated.
- Patients and caregivers are encouraged to attend.

## Carcinoid Cancer Foundation Looks Toward the Future

**Keith R.P. Warner**, President of Highland Water LLC in Denver, Colorado, has been named Chief Executive Officer of the Carcinoid Cancer Foundation (CCF). The appointment was announced by Richard R.P. Warner, M.D., Medical Director of the Foundation, who said, "I am delighted that CCF's Board of Directors has selected my son for the position of CEO. The Foundation was founded by my family and patients in the late 1960s to enable me to continue my research on this rare cancer. With Keith Warner's appointment, the legacy of the Foundation will continue. His background in business and administration makes him the ideal CEO for the fifth decade and beyond of the Carcinoid Cancer Foundation."

The oldest foundation of its kind in the United States, the Carcinoid Cancer Foundation has earned worldwide recognition as a resource for patients, medical professionals, and researchers. CCF's mission focuses on three distinct areas: research, conducting prospective and retrospective studies, as well as funding neuroendocrine tumor/carcinoid cancer research by physicians and

*Keith Warner  
Photo by Droolphoto.com*

scientists; awareness and education for the patient and medical communities; and support/advocacy, primarily for the patient community.

According to Keith Warner, "I am personally committed to changing the statistic that over 90% of all carcinoid/NET patients are initially incorrectly diagnosed and treated for the wrong disease. We must bring greater awareness to these rare cancers as we all look towards the day there is a cure for carcinoid/NET patients. I am very excited about the future of the Carcinoid Cancer Foundation as we work with carcinoid/NET patients, the medical and healthcare communities, corporations and foundations, and our Board of Directors."

An entrepreneur, Mr. Warner has founded or acquired a number of companies ranging from the wine industry to management consulting. Since 2004 he has been President of Highland Water LLC, a supplier of industrial, commercial, and water treatment systems. He founded Strategicore Consulting, for which he provided extensive management consulting services to various technology, product, and service companies, including Pristine Health, a venture capital group; All Star Kids Fitness Center; and Stassen North America, a private label tea/herb manufacturer. He was Co-Founder and President of the Rocky Mountain Spice Company, a spice importer/food manufacturer, and Co-Founder and Vice President of Ready Care Industries, a distributor/manufacture of locker room beauty care products. He has also worked for a Wall Street money management firm and in commercial real estate.

Mr. Warner earned a Bachelor of Science degree in Business Administration from the University of Denver and a Master's degree in Business Administration, with a concentration in marketing and finance, from Boston University, with national honors recognition. He resides in Denver, Colorado.

# New Orleans 2009 Conference Lectures Notes

Please note that these edited and cryptic records are those taken by one person and that not all points of any lecture are covered. Due to the possibility in error or interpretation, it is highly advised to seek a professional medical opinion before relying on treatments from these notes. These notes are provided only to give you some insight in to which ideas you may want to seek further follow-up information & discuss with your doctor . It is suggested that you use these notes as index to topics of interest and then refer to the recorded video of that lecture when they become available.

Please refer to notes from prior conferences, as some ideas presented are built upon prior lectures. These notes can be found in past newsletters from the Metro New York Carcinoid Support Group at [www.carcinoid.us](http://www.carcinoid.us) Due to the use of concurrent (simultaneous) lectures approx. 1/3 of the information covered could not be attended to take notes.

insulin release leads to growth  
 Histamine release is usually from foregut tumors  
 Reconstruction of ileo cecal valve is not possible and the removal is not that problematic to warrant an attempt  
 Use of anti-angiogenics (black raspberry powder) with heart disease does not allow new, helpful blood vessels to grow for the heart

**Dr. David Bushnell – “What are the ways to scan for NETs? PET, MRI, CT & Nuclear Medicine scanning”**

Timing of contrast administration to image is important  
 Gallium 68 will probably replace Octreoscan  
 Do not take Over The Counter decongestants before MIBG scan  
 123 I MIBG vs. In 111 Pentreotide  
 10% had tumors that only showed on MIBG  
 20% had tumors that showed only on Octreoscan

Small role for PET in NETs  
 If tumors do not image on Octreoscan, but do image on PET, patient may have poorer prognosis  
 Open MRI images may be inferior result (distance from unit to tissue)

**Dr. Stanley Goldsmith – “PET scans, Gallium scans, F-18 DOPA scans”**

Wide variation of Spect and Spect/CT image quality  
 Not all PET is FDG-PET

| Material   | half life | requires                      |
|------------|-----------|-------------------------------|
| 18 Flora   | 112 min   | Commercial and Cyclotron      |
| 68 Gallium | 68 min    | Commercial and Generator      |
| 11 Carbon  | 20 min    | In house cyclotron (5HTP PET) |

Must learn to differentiate image of normal pancreas from problem pancreas

**Dr. Edward Coleman – “I-123, I-131 MIBG – Scans, therapy, results”**

Newer MIBG material (molecular

insight), every molecule has 131 In attached  
 Even with Iodine blocking, thyroid can still get some, tolerable exposure during treatment  
 Nausea may start 8-12 hours after infusion and last up to 4 days  
 Blood counts drop after 2 weeks, but not severely

**Dr. Richard Campeau - “Bone Metastases – Strnium-89, Samarium-153, Biophosphates”**

Bone metastases can cause more problems than just pain  
 15- to 20 of Carcinoids have bone mets, but not all have pain  
 Traditional pain management has many side effects and can have significant costs  
 Management of bone mets requires multi-modal approach  
 Biophosphates  
 Radiopharmaceuticals

**Dr. Richard Baum**

Yttrium 90 therapy  
 PET/CT using Gallium 68 takes only 20 minutes for a whole body scan  
 Shows mets in heart well (normal angiogram after angina did not reveal it)  
 SUV = Standardized Uptake Values  
 With Gallium 68 can assign a number value to uptake amount  
 External Beam Radiation on NETs is useless (except for painful bone mets)  
 Need a multi-disciplinary team, selecting individualized therapy  
 long term, low dose & combined use of Yttrium 90 and Lutetium 177

**Dr. Abe Delpassand**

No radiopharmaceutical is 100% selective  
 Advantages  
 Can “test drive” at a lower dose  
 Cross fire effect  
 Radiation goes through cells and to others to which it is not directly attached  
 About 90 patients treated with Indium 111 high dose

10% had partial response of disease  
 75% had stable disease  
 15% had progression of disease  
 81% had at least a 25% increase in their functional living index

Average time to disease progression is about 19 months

Status of Lutetium 177 therapy

Awaiting testing on European formula

Expect first patient to be treated before end of 2009

**Dr. Jan Müller**

Yttrium 90  
 2 to 3 treatment cycles, 8 to 12 weeks apart  
 Life quality improvements  
 Diarrhea, 83%  
 Flushing, 48%  
 Asthma, 63%  
 Pain, 71%  
 Survival time – 50% had 5 year survival  
 Must stay in hospital 3 days  
 Can travel about city  
 Can fly after 3 days

**Question and Answer Session – Müller, Delpassand, Baum, Campeau, Coleman, Goldsmith, Bushnell & O’Dorisio**

Your scan should be read by someone with experience in your disease  
 U.S. needs to follow European Union standards of measurement labels and nomenclature  
 MIBG therapy should be used for patient with progressive disease that is not responding to other treatment  
 Repeated uses of MIBG does not have declining response in subsequent treatments  
 Yttrium 90 can be repeated if needed  
 Surgery is still the first line of treatment  
 Do not write into the FDA directly to complain about lack of an approval. That effort only ticked off the FDA workers (who are required to review each letter) so they took their time reviewing the applications and paperwork.
